

## A COMMITMENT AS GOOD AS GOLD

### *Experience the Gold Standard of Service*

MISER™ provides the technology foundation you need to successfully navigate today's dynamic financial industry.

#### **Flexibility and Control**

The MISER core processing solution delivers a powerful combination of software flexibility and real-time access to information to increase productivity and enhance product and service offerings. MISER's core functionality and ancillary software applications can help you automate manual processes, operate more efficiently, and improve customer service.

#### **24/7 Access Across All Service Delivery Channels**

Customers are insisting on having 24/7 access to their financial information and relying on "self service" channels such as the Internet, ATMs, and telephone banking to conduct their banking business. MISER allows you to present consistent information across all service delivery channels and accurately measure channel usage.

#### **Scalability and Reliability**

The right technology can help you grow your business. MISER customers range from start-ups to multi-billion dollar financial institutions – all running on the same software and technology platform.

#### **In-house and Service Bureau Alternatives**

MISER is available for in-house operation or as a service bureau alternative; you decide which environment best suits your individual needs.
